DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 2, 3 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent Design D285238 issued to Cellini. Cellini discloses a muzzle brake comprising a cylindrical body having a central bore, at least one opening having a longitudinal dimension greater than a lateral dimension, and, a plurality of gas holes linearly disposed along a longitudinal axis of the body.
- 3. Claims 1, 2, 3 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 4967642 issued to Mihaita. Mihaita discloses a muzzle brake comprising a cylindrical body 200 having a central bore, at least one opening 212 having a longitudinal dimension greater than a lateral dimension, and, a plurality of gas holes 210 linearly disposed along a longitudinal axis of the body.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/004,999 Page 3

Art Unit: 3641

Claims 9, 10 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Cellini or Mihaita in view of U.S. Patent No. 5305677 issued to Kleinguenther. Cellini or Mihaita disclose a muzzle brake as described above. But, neither Cellini nor Mihaita discloses the at least one opening as claimed by the applicant. However, Kleinguenther discloses such an opening. Specifically, Kleinguenther discloses a muzzle brake comprising a cylindrical body of predetermined length having a plurality of exhaust ports 9 formed by the intersection of multiple radial holes (col. 3, Il. 31-33 to col. 4, Il. 1-4). At the time of the invention, one of ordinary skill in the art would have found it obvious to form a longitudinal slot with the intersection of multiple radial holes as disclosed by Kleinguenther. The suggestion/motivation for doing so would have been to form a slot by drilling as opposed to milling.

Response to Arguments

Applicant's arguments/amendments are not persuasive. Specifically, applicant argues "neither Cellini nor Mihaita disclose...an elongated opening positioned nearest to said first ends as compared to *any other* opening" (emphasis added). However, it is clear that the elongated openings of Cellini, as compared to the openings on the discharge end of the muzzle brake, are positioned nearest said first end.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Cellini, Buss, Hull, Cyktich, Seberger, Dabrowski, Shapel, Lance, Bartolles, Mazzanti, Kristandt, Hillman, Tocco, Robyler, Leffel, A'Costa and Kholodovsky are cited as of interest to show similar muzzle brakes.
